

Cleaning Tips from Color Powder Supply Co

Does your color powder clean easily?

Our color powder uses all natural dyes that clean easily off most surfaces. Cleaning is as easy as brushing or blowing off a majority of the color powder, then a little soap and water will take care of the rest.

While our color powder is made to be washable, the natural dyes do have the potential to stain certain materials or surfaces. Porous materials, such as vinyl, are more prone to staining. We recommend testing a small, hidden area when using color powder products if there are concerns.

How do I clean powder off my skin or hair?

Cleaning off your skin and hair is similar to dusting off dry dirt. Most of it can be removed by shaking and dusting yourself off. The remaining will go away with a bath or shower.

Please note that fair skin and hair may be left with a slight tint for a day or two if heavily covered and left on for a long period of time. This will go away, of course, but maybe don't participate if you have engagement photos the next day ;)

How do I clean powder off my clothes and materials?

Most clothing can be washed as normal without staining. If staining occurs on white clothing, it can be cleaned with laundry whitener.

Porous surfaces such as leather, vinyl, suede, or foam products can be the most difficult to clean. Please do not wear valuable clothes or shoes to color powder events. Use plastic, towels, or drop cloths to cover interior car seats, golf cart seats, or anything else that you would normally protect from dirt or mud.

Color Powder Safety Information from Color Powder Supply Co

Is your color powder safe?

We strive to have the safest color powder available in the USA. Our formula uses simple and 100% natural ingredients including Corn Starch and Natural dyes. It is free of harsh chemicals, heavy metals, and all other toxic ingredients. Although it's made of all edible ingredients, it is not intended for consumption.
